SUBJECT INDEX

Acoustic ambiguity functions, application of digital image processing to, 193
Acoustic images, computer evaluation of real-time x-ray and, 273
Adaptive gate multifeature Bayesian statistical tracker, 68
Adaptive histogram equalization and its applications, 204
Adaptive restoration of images with speckle, 28
Ambiguity functions, application of digital image processing to acoustic, 193
Amplitude, signal reconstruction from Fourier transform, 214
Analysis and evaluation of sequential quantizers, 321
Analysis of three-dimensional time varying scene, 309
Aperture radar digital image formation processing, synthetic, 11
Application of digital image processing to acoustic ambiguity functions, 193
Application of Hadamard, Haar, and Hadamard-Harr transformation to image coding and bandwidth compression, 336
Arabic words, machine recognition of cursive, 286
Arrays, hybrid modeling of staring planar, 120
Assembly system, SAM opto-electronic picture sensor in a flexible manufacturing, 98
Automatic evaluation of interferograms, 386
Automatic scene-adaptive pattern removal, 53
Automatic target recognition systems for infrared images, performance considerations in, 56

Background suppression for moving point source detection, 169
Bandwidth compression, application of Hadamard, Haar, and Hadamard-Haar transformation to image coding and, 336
Bayesian statistical tracker, adaptive gate multifeature, 68
Biological membranes, processing of noisy high resolution electron micrographs of crystalline, 233

Cardio-surgical thermography, 249
Cartographic data through a common map base, integration of imagery and, 163
Chromatism in color images, restoration of defocusing and, 242
Coding and bandwidth compression, application of Hadamard, Haar, and Hadamard-Haar transformation to image, 336
Coding using Gaussian Markov random field models, image synthesis and, 328
Color images, restoration of defocusing and chromatism in, 242
Composite predictive coding of the NTSC color TV signal, 343
Compressing, ordering and displaying image data, 302
Computer evaluation of real-time x-ray and acoustic images, 273
Computer reconstructions from surface contours for diagnostic imaging, modeling three-dimensional, 152
Constructive invariant coupling method applications for statistical data analysis and effective decision rule synthesis in digital image processing problems, 293
Contours for diagnostic imaging, modeling three-dimensional computer reconstructions from surface, 152
Coupling method applications for statistical data analysis and effective decision rule synthesis in digital image processing problems, constructive invariant, 293
Crystalline biological membranes, processing of noisy high resolution electron micrographs of, 233
Cursive Arabic words, machine recognition of, 286

Deblurring, direct image plane, 39
Defocusing and chromatism in color images, restoration of, 242
Detection, background suppression for moving point source, 169
Detection system, forward looking infrared (FLIR) image enhancement for a generic blob target, 210
Diagnostic imaging, modeling three-dimensional computer reconstructions from surface contours for, 152
Digital image formation processing, synthetic aperture radar, 11
Digital image processing to acoustic ambiguity functions, application of, 193
Digital image processing problems, constructive invariant coupling method applications for statistical data analysis and effective decision rule synthesis in, 293
Digital processing of medical imagery, 156
Direct image plane deblurring, 39
Displaying image data, compressing, ordering and, 302

Edge tracing, image segmentation by, 361
Electron micrographs of crystalline biological membranes, processing of noisy high resolution, 233
Enhancement for a generic blob target detection system, forward looking infrared (FLIR) image, 210
Equalization and its applications, adaptive histogram, 204
Event-detecting video system, real-time photoelectron, 135

Formation processing, synthetic aperture radar digital image, 11
Forward looking infrared (FLIR) image enhancement for a generic blob target detection system, 210
Forward looking infrared (FLIR) target classification, statistical approach for, 77
Fourier transform amplitude, signal reconstruction from, 214

Gate multifeature Bayesian statistical tracker, adaptive, 68
Gaussian Markov random field models, image synthesis and coding using, 328
General purpose vision sensor, 127
Generic blob target detection system, forward looking infrared (FLIR) image enhancement for a, 210
Gerchberg algorithm, interpolation of two-dimensional surfaces using the, 226

Haar, and Hadamard-Haar transformation to image coding and bandwidth compression, application of Hadamard, 336
Hadamard, Haar, and Hadamard-Haar transformation to image coding and bandwidth compression, application of, 336
High resolution electron micrographs of crystalline biological membranes, processing of noisy, 233
High resolution image registration by thresholded difference, 178
High speed pattern inspection system, 278
Histogram equalization and its applications, adaptive, 204
Hybrid modeling of staring planar arrays, 120

Image coding and bandwidth compression, application of Hadamard, Haar, and Hadamard-Haar transformation to, 336
Image data, compressing, ordering and displaying, 302
Image enhancement for a generic blob target detection system, forward looking infrared (FLIR), 210

Image formation processing, synthetic aperture radar digital, 11
Image generation, image scale, translation, and intensity transformations for real-time, 83
Image parallel machines, neighborhood access problem in, 106
Image plane deblurring, direct, 39
Image processing to acoustic ambiguity functions, application of digital, 193
Image processing problems, constructive invariant coupling method applications for statistical data analysis and effective decision rule synthesis in digital, 293
Image registration and rectification, radar, 186
Image registration by thresholded difference, high resolution, 178
Image scale, translation, and intensity transformations for real time image generation, 83
Image segmentation by edge tracing, 361
Image skeletonization for object position measurement, 92
Image synthesis and coding using Gaussian Markov random field models, 328
Imagery and cartographic data through a common map base, integration of, 163
Imagery, digital processing of medical, 156
Images, computer evaluation of real-time x-ray and acoustic, 273
Images, model-based restoration procedure for small, low-resolution optical, 2
Images, performance considerations in automatic target recognition systems for infrared, 56
Images, restoration of defocusing and chromatism in color, 242
Images, segmenter wobble in infrared, 369
Images with speckle, adaptive restoration of, 28
Imaging, modeling three-dimensional computer reconstructions from surface contours for diagnostic imaging, 152
Infrared images, segmenter wobble in, 369
Infrared (FLIR) target classification, statistical approach for forward looking, 77
Insect eye, mechanical model of the, 139
Inspection and evaluation system (AIES), near real-time automated, 114
Inspection system, high speed pattern, 278
Integration of imagery and cartographic data through a common map base, 163
Intensity transformations for real-time image generation, image scale, translation, and, 83
Interferograms, automatic evaluation of, 386
Interpolation of two-dimensional surfaces using the Gerchberg algorithm, 226

Machine recognition of cursive Arabic words, 286
Manufacturing assembly system, SAM opto-electronic picture sensor in a flexible, 98
Map base, integration of imagery an cartographic data through a common, 163
Markov random field models, image synthesis and coding using Gaussian, 328
Mechanical model of the insect eye, 139
Medical imagery, digital processing of, 156
Membranes, processing of noisy high resolution electron micrographs of crystalline biological, 233
Micrographs of crystalline biological membranes, processing of noisy high resolution electron, 233
Model of the insect eye, mechanical, 139
Model-based restoration procedure for small, low-resolution optical images, 2
Modeling of staring planar arrays, hybrid, 120
Modeling three-dimensional computer reconstructions from surface contours for diagnostic imaging, 152
Models, image synthesis and coding using Gaussian Markov random field, 328

Near real-time automated inspection and evaluation system (AIES), 114
Neighborhood access problem in image parallel machines, 106
Noise, signal recovery from signal dependent, 47
Noisy high resolution electron micrographs of crystalline biological membranes, processing of, 233

Optical images, model-based restoration procedure for small, low-resolution, 2
Opto-electronic picture sensor in a flexible manufacturing assembly system, SAM, 98

Parallel machines, neighborhood access problem in image, 106
Pattern inspection system, high speed, 278
Pattern recognition approach to scene matching, syntactic, 258
Pattern removal, automatic scene-adaptive, 53
Performance considerations in automatic target recognition systems for infrared images, 56
Performance measures for statistical segmentation, 348
Photoelectron event-detecting video system, real-time, 135
Picture sensor in a flexible manufacturing assembly system, SAM opto-electronic, 98
Planar arrays, hybrid modeling of staring, 120
Plane deblurring, direct image, 39
Point source detection, background suppression for moving, 169
Position measurement, image skeletonization for object, 92
Predictive coding of the NTSC color TV signal, composite, 343
Processing of noisy high resolution electron micrographs of crystalline biological membranes, 233

Quantizers, analysis and evaluation of sequential, 321

Radar digital image formation processing, synthetic aperture, 11
Radar image registration and rectification, 186
Real-time image generation, image scale, translation, and intensity transformations for, 83
Real-time automated inspection and evaluation system (AIES), near, 114
Real-time photoelectron event-detecting video system, 135
Real-time x-ray acoustic images, computer evaluation of, 273
Recognition approach to scene matching, syntactic pattern, 258
in automatic target, 56
Reconstruction from Fourier transform amplitude, signal, 214
Reconstructions from surface contours for diagnostic imaging, modeling three-dimensional computer, 152
Rectification, radar image registration and, 186
Registration and rectification, radar image, 186
Registration by thresholded difference, high resolution image, 178
Resolution electron micrographs of crystalline biological membranes, processing of noisy high, 233
Resolution image registration by thresholded difference, high, 178
Resolution optical images, model-based restoration procedure for small, low-, 2
Restoration of defocusing and chromatism in color images, 242
Restoration of images with speckle, adaptive, 28
Restoration procedure for small, low-resolution optical images, model-based, 2
Rotation invariant pattern recognition, 266

SAM opto-electronic picture sensor in a flexible manufacturing assembly system, 98
Scene-adaptive pattern removal, automatic, 53
Scene, analysis of three-dimensional time varying, 309
Scene matching, syntactic pattern recognition approach to, 258
Segmentation by edge tracing, image, 361
Segmentation, performance measures for statistical, 348
Segmenter wobble in infrared images, 369
Sensor in a flexible manufacturing assembly system, SAM opto-electronic picture, 98
Sensor, general purpose vision, 127
Sequential quantizers, analysis and evaluation of, 321
Signal dependent noise, signal recovery from, 47
Signal reconstruction from Fourier transform amplitude, 214
Signal recovery from signal dependent noise, 47
Skeletonizaton for object position measurement, image, 92
Source detection, background suppression for moving point, 169

Speckle, adaptive restoration of images with, 28
Staring planar arrays, hybrid modeling of, 120
Statistical approach for forward looking infrared (FLIR) target classification, 77
Statistical data analysis and effective decision rule synthesis in digital image processing problems, constructive invariant coupling method applications for, 293
Statistical segmentation, performance measures for, 348
Statistical tracker, adaptive gate multifeature Bayesian, 68
Suppression for moving point source detection, background, 169
Surface contours for diagnostic imaging, modeling three-dimensional computer reconstructions from, 152
Surfaces using the Gerchberg algorithm, interpolation of two-dimensional, 226
Syntactic pattern recognition approach to scene matching, 258
Synthetic aperture radar digital image formation processing, 11

Target classification, statistical approach for forward looking infrared (FLIR), 77
Target detection system, forward looking infrared (FLIR) image enhancement for a generic blob, 210
Target recognition systems for infrared images, performance considerations in automatic, 56
Thermography, cardio-surgical, 249
Three-dimensional computer reconstructions from surface contours for diagnostic imaging, modeling, 152
Three-dimensional time varying scene, analysis of, 309
Thresholded difference, high resolution image registration by, 178
Time varying scene, analysis of three-dimensional, 309
Tracing, image segmentation by edge, 361
Tracker, adaptive gate multifeature Bayesian statistical, 68
Transform amplitude, signal reconstruction from Fourier, 214
Transformations for real-time image generation, image scale, translation, and intensity, 83
Translation, and intensity transformations for real-time image generation, image scale, 83
TV signal, composite predictive coding of the NTSC color, 343

Very large scale integration (VLSI) approach to feature extraction, 378
Video system, real-time photoelectron event-detecting, 135
Vision sensor, general purpose, 127

Wobble in infrared images, segmenter, 369

X-ray and acoustic images, computer evaluation of real-time, 273
